Design & Manufacture

All OVIA ELECTRICAL products are manufactured to the highest quality levels in our industry and comply with all relevant Australian standards.

When designing a new range of products, aspects including technical features, materials used and the aesthetic appeal of the individual products are considered. Location and function along with energy efficiency and reliability ensure we develop with current and future markets in mind. Our team of designers and product developers works closely with the sales and support areas within our business as well as referencing market trends and inspectors' references. This enables Scolmore to develop a choice of quality electrical accessories and lighting products to suit even the most demanding specifiers, architects and installers.

Type	Brand	Registration Number
